CONTINUING PROFESSIONAL DEVELOPMENT

STRUCTURED NOISE MANAGEMENT PROGRAMS

*Acoustar* is a registered training organisation providing structured training programs. Unique amongst registered training organisations we provide practical competency based Continuing Professional Development (CPD) programs in noise monitoring, evaluation and risk management.

Competency is a combination of work practice and knowledge. Every job requires a specific set of knowledge and skills and this varies depending on the type and complexity of the job. Our programs are designed for environmental impact assessments and noise in workplaces (personal exposure); noise evaluation in work-recreation-relaxation areas; measuring and evaluating noise emissions; noise compliance testing and audits.

Two CPD structured training programs are offered with a Statement of Attendance:
- A distance-learning program of a minimum of 10-hours’ study and assignments;
- A face-to-face program of 6-hours home study and then 4-hours classroom plus practical assignment.

**Plate 1** illustrates the interaction between:
- Industrial noise and vibration
- Design of spaces
- Entertainment noise
- Industrial noise
- Office noise exposure
- Personal noise exposure
- Residential amenity
- Transportation noise and vibration

Our training is designed for field staff, site coordinators, Health & Safety Representatives, managers and senior personnel employed by enterprises/unions/regulatory authorities in a wide range of industry sectors, such as: building and construction, manufacturing, residential building design and certification, compliance and audit.

**We train confident, competent personnel**

Full details of our Courses and Fees Policy are provided on the Acoustar website:
