Continuing professional development in
Work Health and Safety

As part of our assistance to industry and the wider public, Acoustar offers study programs for interest and continuing professional development. The modules are available for ‘Recognition of Prior Learning’ within the Acoustar training programs.

Study Time
Each module is estimated to take 10 hours (minimum) of study. A participant completes the study program at a pace that suits the person. One person may complete the course over a weekend; another person may take a month or so. The modules are available through distance learning. You are asked to complete an assignment for assessment.

Link to Standard Coursework
Each module is designed as a ‘stepping-stone’ in the Acoustar ‘Recognition of Prior Learning’ program as required by the Australian Skills Quality Authority. Where possible, individual CPD modules contain the same information as topics in a similar BSB41415 Work, Health and Safety unit.

This allows individual CPD modules to be aggregated to meet the requirements of a BSB41415 unit. The student then only needs to complete the practical assignments and overall competency examination.

Industry Involvement
Acoustar welcomes industry requests for training programs. Please contact us.

Training programs for confident, competent personnel
